

General:

When connecting an audio/video source often it results in noise distortion. Most of the times this is caused by a ground loop and is easy to solve with a ground loop isolator. This device just forwards the signal but blocks the galvanic connection which is caused by the ground loop. Easy to mount by connecting in between the connectors.

**Features:**

- # Metal casing
- # Plug and play connection
- # Frequency 20-30kHz

The following will be supplied:

- Groundloop isolator basic
- Warranty
- Invoice

Product specifications:

- Sizes: 35x 65mm
- Connections: 2x RCA male - 2x RCA female
- Connector: RCA
- 20 AMPS
- Input 30W
- Max. input: 60W
