

LEO ACTIVE SOUND 7.2 OBDII Sound Generator 2x Bass speakers

Art. Nr: LEO-7.0-KIT-1

NEXT LEVEL ACTIVE SOUND - An even more realistic sound experience.

Real vehicle sounds recorded on a high-end acoustic test bench.

The PANTHERA LEO Active sound generator asks in real time, via an OBD-II adapter, all relevant data by radio from the vehicles engine control unit and generates a realistic driving noise from it. Thanks to our OBD-solution, assembly is quick and easy. The loudspeaker of the Active Sound System can be installed in the vehicle as well as outdoors. The LEO Active Sound System is delivered preconfigured with standard settings and therefore is immediately ready for use. For an individual sound experience we recommend setting up with the PANTHERA Connect app. Here you can choose from 16 individual vehicle sounds. The system can be switched on and off using the app and the supplied radio remote control.
