

The Bluetooth interface is optional for the iPod interfaces and USB/SD interfaces. It is not possible to use the Bluetooth interface stand alone.

General

The interface enables the possibility to extend the iPod interface or USB/SD interface with Bluetooth audio streaming and/or Bluetooth car kit function. This makes it possible for a phone with A2DP (Advanced Audio Distribution Profile) and HSP (Headset Profile) to pair with the radio system for audio streaming and car kit function via Bluetooth on changer level .

It is also possible to remote control the Bluetooth interface with the original radio buttons and via the Bluetooth module itself.

The power supply for the Bluetooth interface is provided via the mini USB connector on the iPod interface or USB/SD interface .
