

DESCRIPTION

General

The uDAB module allows, in a few simple operations, the best integration of the DAB/DAB+ digital radio.

The uDAB module connects to the radio via USB connection, supplied in the set. Thanks to this connection, uDAB is compatible with all the radios with a USB input.

All uDAB features are handled directly by the radio and/or steering wheel controls. The uDAB audiosignal will be routed directly to the speaker output of the radio by the mini amplifier which is included.

The USB harness, also supplied, will allow the native USB radio function to be maintained, by inserting a USB stick user can listen to his music as before.

Example installation:

HOW DOES IT WORK

Activation of uDAB

To listen to the DAB digital radio, simply select the USB function.

After selecting the USB function, the radio will display the folders that will be named according to the radio channels in the covered area. By selecting the channel of interest radio starts playing.

It is recommended to run a SCAN for the correct reception of the channels/stations present in the signal covered area. The operation is very simple, just select the SCAN folder. Signal scan will start immediately and it takes about 2 minutes.

CONNECTION

Connect the power/speakers T harness of the uDAB set in series the radio one.

Connect the wiring harnesses to the USB input of the radio and to the original USB cable connector.

Connect the DAB antenna.

PACKAGE CONTENTS
